

Sree Anirudh Nannuri

Backend Software Engineer | Full-Stack Engineer | Software Engineer
Los Angeles, CA | +1 (714)-686-0528 | anirudhnannuri9@gmail.com | [LinkedIn](#) | [GitHub](#)
Available to start: Immediately | Open to Relocate

PROFESSIONAL SUMMARY

Software Engineer with experience building backend services, scalable APIs, data-heavy applications, AI/RAG workflows, and full-stack products. Skilled at database optimization, production debugging, cloud deployments, and leveraging GenAI tools to accelerate coding workflows in fast-moving environments.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Java, SQL, Go

Backend & Data: FastAPI, Spring Boot, Node.js, REST APIs, PostgreSQL, MySQL, MongoDB

Frontend & Product: React, Next.js, HTML, CSS

Infrastructure & Debugging: Kafka, Elasticsearch, AWS EC2/S3, Docker, Kubernetes, CI/CD, Linux, Grafana, Postman, Jest

AI & Automation: OpenAI API, Claude API, Llama, Gemma, RAG, Human-in-the-Loop Workflows

WORK EXPERIENCE

Software Engineer Intern - Vupico | Remote, USA

Jan 2026 - Apr 2026

- Owned development of an enterprise SAP Catalog platform from MVP to production, contributing to product roadmap, scalable metadata access, workflow automation, and backend service design.
- Built, tested, and debugged scalable REST APIs while optimizing high-volume metadata search workflows through indexing and query tuning, reducing response latency from 2.0s to 0.2s.
- Integrated Gemma open-source LLM with RAG pipelines to generate grounded enterprise metadata responses, improving AI response speed by 45%.
- Developed and debugged React/Next.js dashboard interfaces for metadata navigation, AI output review, and workflow configuration across production user workflows.

Software Developer - CJ Darcl Logistics | Gurgaon, India

Jan 2022 - Jun 2023

- Built and supported backend services and REST APIs in Agile/Scrum workflows for logistics operations, shipment tracking, GPS updates, and internal business workflows, improving API throughput by 40%.
- Designed Kafka-based data pipelines and reusable backend workflows to process shipment events and GPS updates across downstream tracking systems in near real time.
- Built Elasticsearch indexing pipelines and optimized high-volume operational data retrieval, improving search performance, query reliability, and visibility across internal systems.
- Analyzed production logs, service metrics, and Grafana dashboards to identify trends, anomalies, and performance bottlenecks, improving GPS update performance by 25% and tracking reliability by 15%.

PROJECTS

Archer Labs – AI Model Evaluation Platform (Next.js, React, Python, FastAPI, Supabase)

[GitHub](#)

- Built a full-stack AI evaluation platform with Python/FastAPI backend APIs and provider-agnostic connectors to benchmark, score, and compare LLM outputs across providers.

Cloudcraft - AI-Powered Website Builder (React, Flask, OpenAI API, AWS EC2/S3)

[GitHub](#)

- Built a full-stack web application using React, Flask, OpenAI API, and AWS EC2/S3 to generate, preview, and deploy websites from natural language prompts.

Alfred - Human-in-the-Loop AI Support Workflow Platform (Python, React, PostgreSQL, MongoDB, Llama, Gemma, Claude API)

- Built an AI workflow platform with backend data models, LLM API integrations, and structured review workflows for human-reviewed recommendations and application history tracking.

EDUCATION

California State University Fullerton - Fullerton, California

Aug 2023 - Dec 2025

Master of Science, Computer Science

GPA: 3.4 / 4.0

Coursework: Advanced Algorithms, High Performance Computing, Expert System Design, Advanced Database Management
